$DAC WHITE PAPER

VERSION 1.0 – PUBLIC PREVIEW MARCH 2026

DACnetwork is a hybrid real-digital decentralised ecosystem built on the Solana blockchain, where authentic human activity is recognised as a genuine form of capital. No speculation, no passive staking, no energy-intensive mining — just verifiable, real-world contribution translated into digital value.

$DAC is the Token of Society: a utility token that measures contribution, powers access to services and experiences, and bridges the physical and digital worlds. Its economic logic is elegantly simple: **activity → contribution → $DAC → utility → value.**

⚠️ **Important Disclaimer:** $DAC is a utility token and is not a financial instrument. It does not promise profit, dividends, yield, or fixed redemption value. Participation involves high risks, including total loss of funds. The project is in an early development stage. No public token offering exists at this time. Information may be updated at any time.

Made with GAMMA

What is DACnetwork?

DACnetwork is a decentralised ecosystem that treats human activity as its foundational resource. Built on the Solana blockchain, it validates and rewards physical movement, digital creation (3D modelling and photogrammetry), social participation, VR/AR experiences, and contributions to distributed infrastructure. Technology ensures that value is generated, validated, and distributed transparently and fairly.

The project rejects the dominant paradigms of speculative crypto — there is no passive staking for yield, no energy-intensive proof-of-work mining, and no corporate gatekeeping. Instead, DACnetwork is accessible to anyone with a smartphone, making participation genuinely democratic and globally inclusive.

Physical Movement

Verified GPS-tracked movement generates $DAC. Real steps, real value — no shortcuts.

Digital Creation

3D modelling, photogrammetry, and VR/AR content creation contribute to the ecosystem and earn rewards.

Infrastructure Contribution

Distributed edge nodes and autonomous systems validate activity and earn $DAC for their operators.

Social Participation

Engagement within DACmeta's structured digital society — public spaces, events, and premium experiences — all generate and consume $DAC.

Made with GAMMA

The Three Interconnected Layers

DACnetwork is architected across three deeply integrated layers — Physical, Social, and Economic — each reinforcing the others to create a self-sustaining ecosystem where real-world activity drives digital value.

1

Physical Layer — DAC Smart Systems

Distributed edge infrastructure with autonomous nodes, contextual validation, and local processing. Designed with a **privacy-first** philosophy, Smart Systems bring computation closer to the user, reducing latency and ensuring data sovereignty.

2

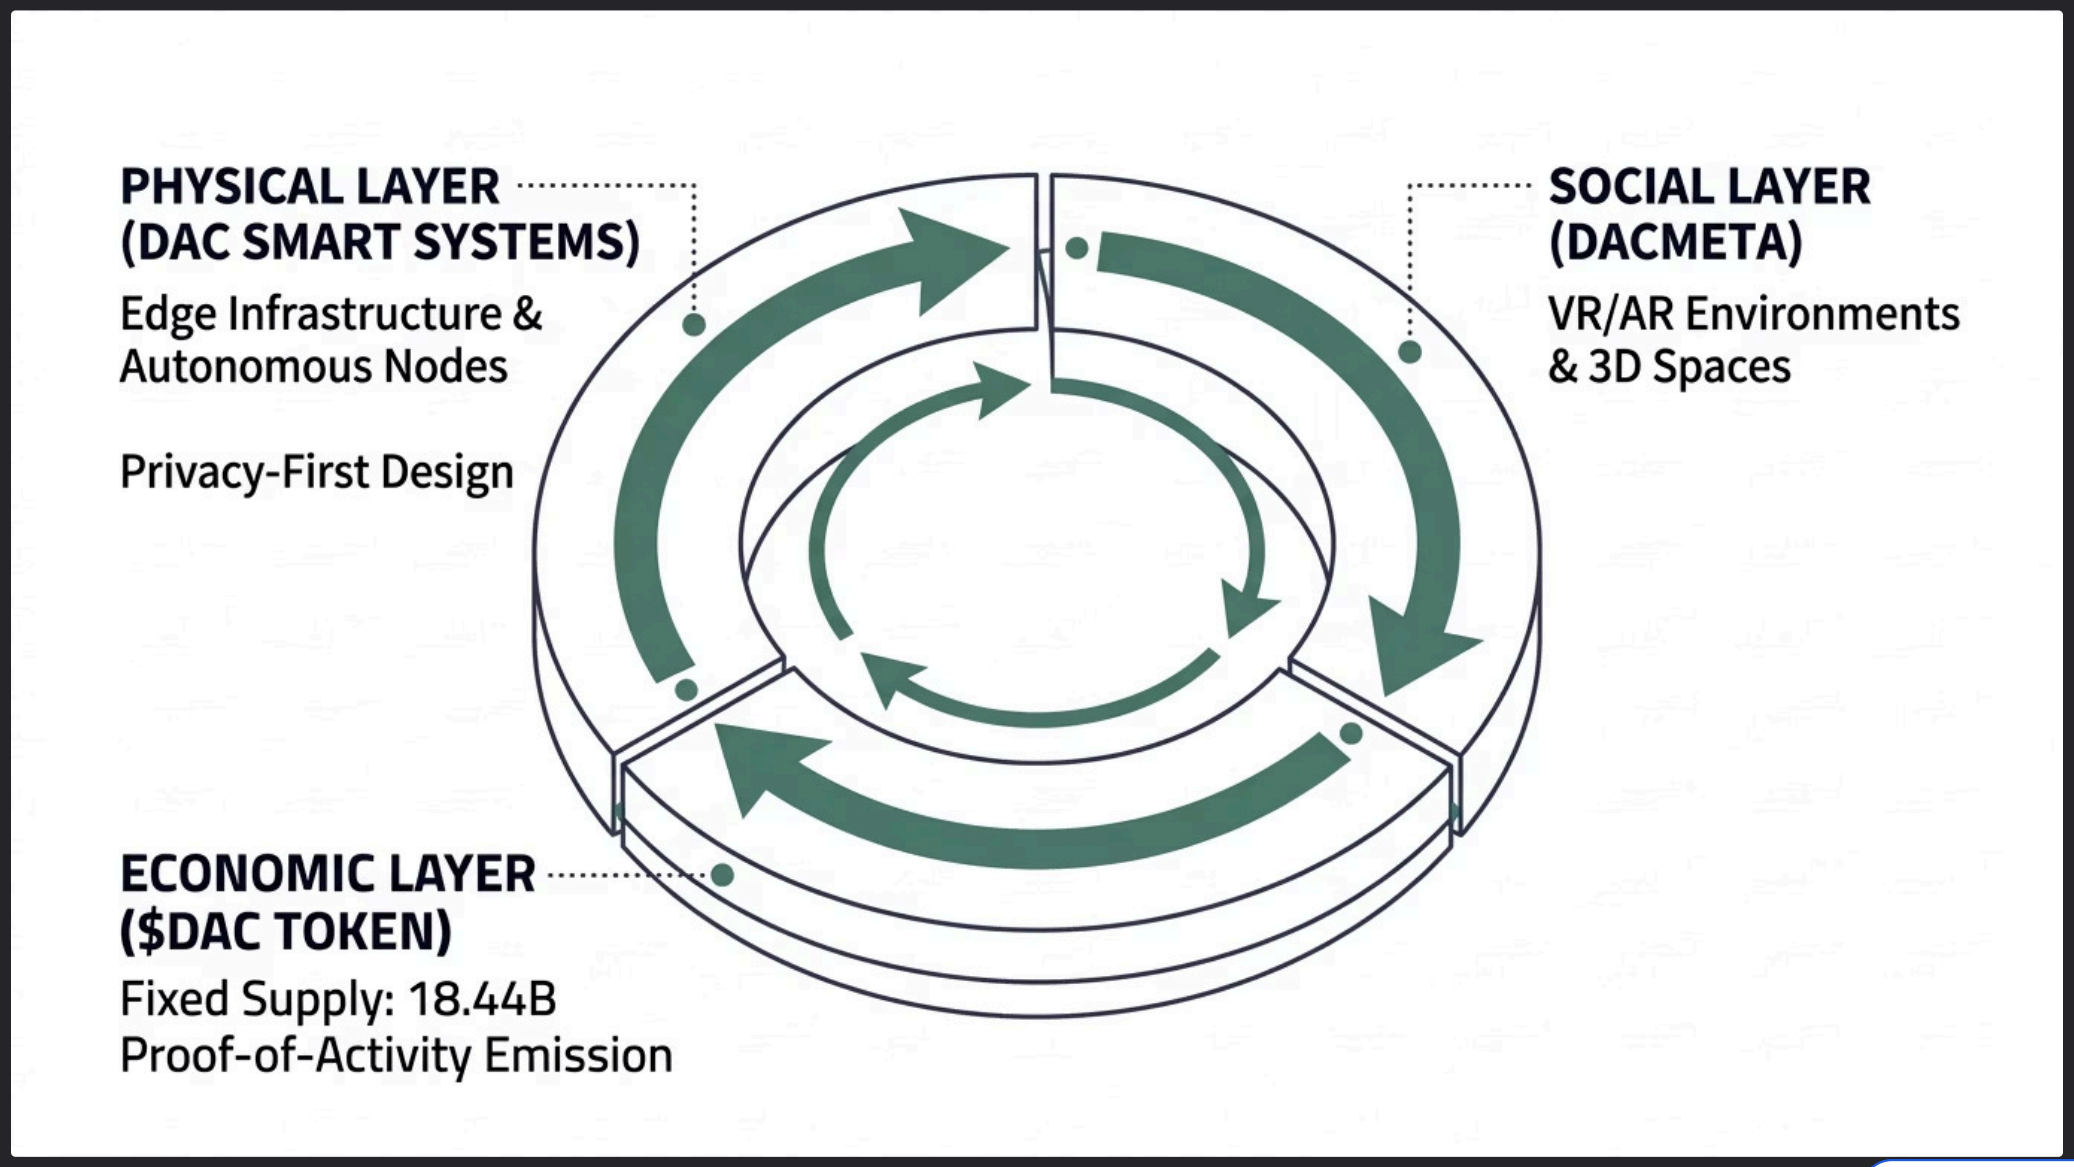
Social Layer — DACmeta

A structured digital society featuring VR/AR environments, 3D assets anchored in physical reality, public spaces, and premium experiences. All interactions and access within DACmeta are denominated and settled in **$DAC**.

3

Economic Layer — $DAC Token

An SPL token on Solana with a **fixed supply of 18,440,000,000 DAC**. Emission occurs via Proof-of-Activity (~1 DAC per 10 km validated GPS, daily cap ~10 DAC/user). A deflationary **0.5% auto-burn** is applied per on-chain transaction, progressively reducing supply over time.



Made with GAMMA

The Economy of Activity: Proof-of-Activity

At the heart of DACnetwork lies the **Proof-of-Activity** protocol — a radical departure from proof-of-work and proof-of-stake models. Value is not minted through computation or capital lockup, but through verified, real-world human action. The circular model is self-reinforcing: activity generates $DAC, $DAC enables ecosystem usage, usage triggers transaction burns, and burns reduce supply — creating long-term deflationary pressure.

rutaX

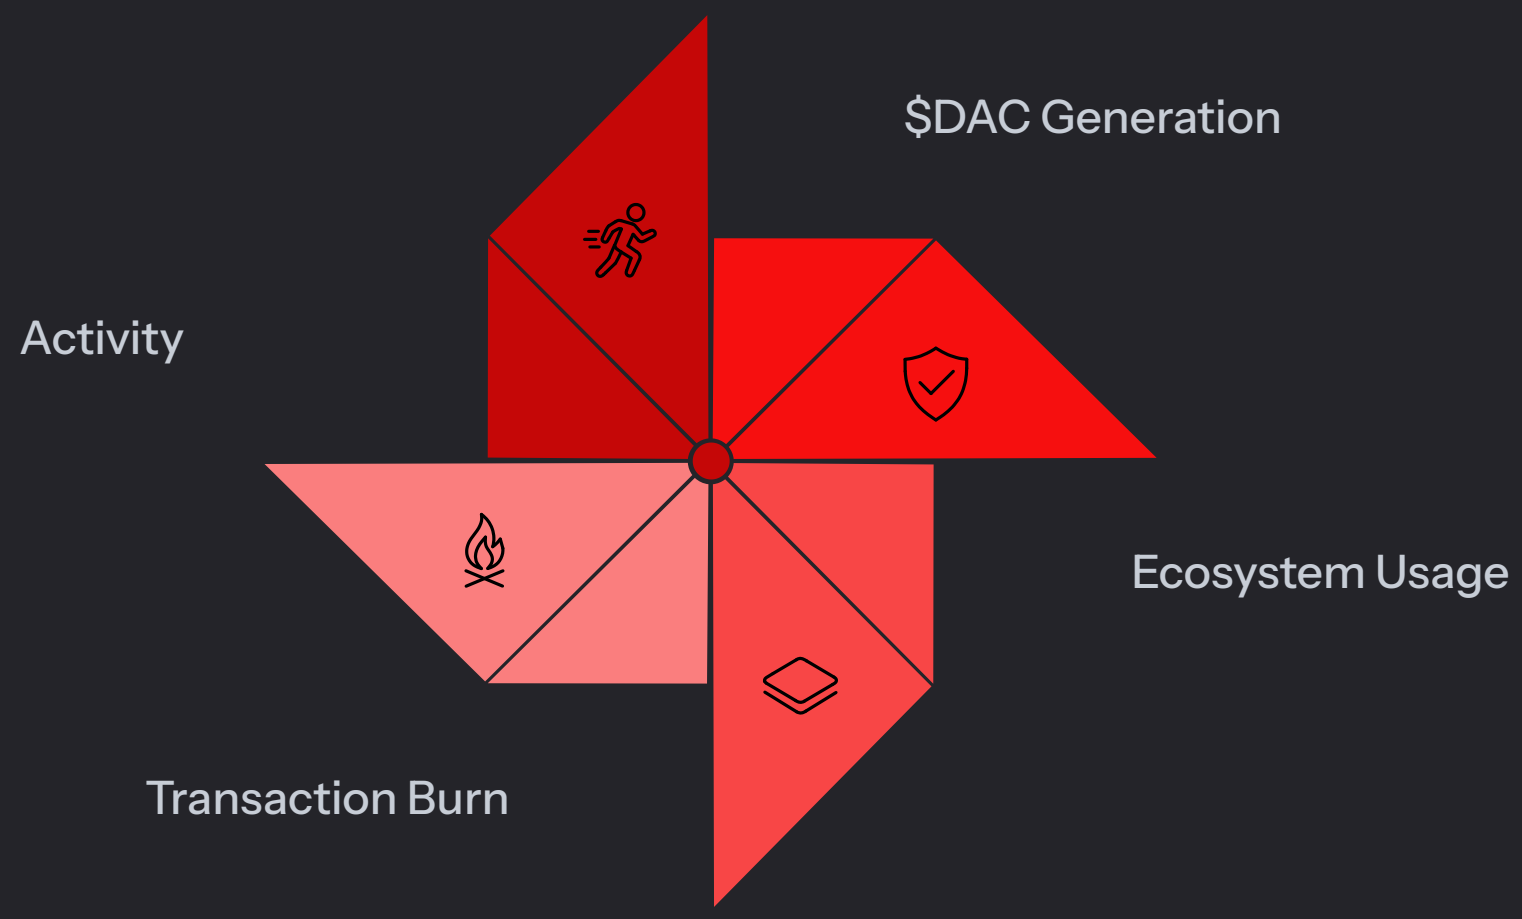
A sustainable **move-to-earn** system where real physical movement generates digital value. GPS validation is paired with robust anti-cheat mechanisms to ensure only genuine activity is rewarded. Approximately **1 DAC per 10 km** validated, with a daily cap of ~10 DAC per user.

DACmeta

VR/AR creation and interaction within the DACmeta environment generate $DAC. Users who build, curate, and engage with digital spaces are rewarded for their creative and social contributions to the ecosystem.

DAC Smart Systems

Operators who contribute to distributed infrastructure — running edge nodes and participating in contextual validation — earn $DAC for their hardware and bandwidth contributions, decentralising the network's backbone.



This circular model ensures that every token in circulation has been earned through genuine contribution, and every transaction made within the ecosystem actively reduces the total supply — aligning incentives between users, builders, and the long-term health of the network.

Why DACnetwork is Different

Energy Efficient

Built on Solana — one of the most energy-efficient blockchains — DACnetwork avoids the environmental cost of proof-of-work systems entirely. Activity, not computation, is the engine of value.

Universally Accessible

No specialised hardware, no large capital requirements. Anyone with a smartphone can participate, earn, and contribute — making DACnetwork one of the most inclusive blockchain ecosystems ever designed.

No Corporate Centralisation

There is no passive capital concentration and no single corporate entity controlling the network. Progressive DAO governance ensures the community steers the ecosystem's future direction.

Real Utility First

$DAC derives value from genuine usage within the ecosystem — not from speculative trading. Real utility is built before speculative value is sought, ensuring long-term sustainability through controlled burn mechanics.

Risks & Current Status

Main Risks to Consider

DACnetwork is an early-stage project and participation carries significant risks. All prospective participants must carefully consider the following before engaging with the ecosystem.

→ Total Loss of Value

Token value may fall to zero. No returns are guaranteed.

→ Adoption Dependency

Ecosystem value depends entirely on user growth and real-world adoption.

→ Technical Risks

Network outages and smart contract vulnerabilities remain real possibilities.

→ Regulatory Uncertainty

Evolving frameworks including MiCA and DAC8 may materially impact operations.

→ Early-Stage Volatility

All metrics, timelines, and token parameters are subject to change.

Current Status — March 2026

DACnetwork is actively building towards its first major milestones. The following reflects the state of the project as of the date of this white paper.

01

Non-Profit Registration

Association registration in Romania currently in progress.

02

rutaX on Devnet

The move-to-earn application is under active development on Solana Devnet.

03

DACmeta Prototype

VR/AR social layer prototype development is ongoing.

04

Community Growth

Active and growing community on X (@DACsociety), Telegram, and Discord.

05

Next Milestones

rutaX MVP beta, official MiCA white paper, Solana grants application, and website launch.

Made with GAMMA

Conclusion: Move. Earn. Evolve.

DACnetwork proposes a fundamentally different model for how value is created in the digital economy. Rather than rewarding capital accumulation or computational power, it rewards the most abundant and democratic resource available: **verifiable human activity**. Every step taken, every digital asset created, every node operated — all of it contributes to a living, breathing economy built on real contribution.

$DAC is not merely a token. It is a unit of society — a measure of what people actually do, create, and build together. With a fixed supply, deflationary burn mechanics, progressive DAO governance, and a commitment to accessibility over exclusivity, DACnetwork is designed for long-term sustainability rather than short-term speculation.

> *"Value originates from verifiable human activity. Move. Earn. Evolve."*
